

Patient Notifications

Use Notify for Patient Admissions/Discharge Updates

Notify, via the BayCare Health Information Exchange (HIE), delivers provider-specific notifications about select Emergency Department and inpatient admission or discharge events for BayCare hospitals. BayCare registrars will record the name of the patient's primary care physician at registration to facilitate the notification process.

Physicians can receive notification in one of three ways:

- **Email (non-secure, non-direct):** An email is sent to the physician's email account based on an admission or discharge event. Each email contains a link to the HIE Notify dashboard where the physician can log in to view patient details.
- **Text message:** A message is sent to the physician's cell phone on an admission or discharge event. Each message contains a link to the HIE Notify dashboard where the physician can log in to view patient details.
- **Direct Secure email:** A secure email containing patient demographic details is sent to your Direct Secure address. The notification will provide patient demographics but won't provide a detailed report of the admission or discharge.

To register for BayCare HIE Notify

- Call the BayCare Information Services (IS) Help Desk at (727) 467-4700 and request a ticket for the HIE team.
- Email the Health Information Exchange team directly: hie@baycare.org
